

### Superspec S-10 -1601

High performance UV Vis NIR Spectroscopy

#### Features

Double beam Spectrophotometers	\$3800
Single beam instruments	\$1280
Visible spectrophotometers	\$660
Wavelength	190 – 1100nm
SBW Resolution	0.1nm
Working modes	T.A.C.E.
Delivery	7 Days

News Release NL334

July 2019

**Our new catalogue for our latest range of UV Vis instruments is now available plus dealer net price list**

### The all new S-10 Superspec series of UV - VIS - NIR Spectrophotometers

A superb new range of spectrophotometers providing low stray light, high sensitivity, extremely reliable and the best value on the market today

Options are available for kinetics, % transmission and absorbance, plus concentration determination and much more. Sample handling includes flow cells, peltier temperature controlled cells, auto sampling, micro and long path length cells, fluorescence and reflectance,

This is a great range of instruments economically priced, providing very high reliability and superb all round specifications
